

Table of Contents

	Page
Forward	i
Chapter 1: Introduction	1
1.1. Phonological inventory of Mandarin	2
1.1.1. Vowels	2
1.1.2. Consonants	4
1.1.3. Tones	4
1.1.4. The syllables	9
 Chapter 2: Acoustic correlates of tone	 13
2.1. Production measurement of Mandarin vowels	13
2.1.1. Objectives	13
2.1.2. Methodology	13
2.1.2.1. Recorded Mandarin vowels in all four tones in citation forms	14
2.1.2.2. Recorded spontaneous speech	16
2.1.2.3. Inclusion of tokens	16
2.1.2.4. Analysis	17
2.1.2.4.a. Duration measurement of Mandarin vowel [i]	18
2.1.2.4.b. Duration measurement of vowel [i] in spontaneous speech	22
2.1.3. Results	22
2.1.3.1. Results of duration measurement of all Mandarin vowel phonemes	22
2.1.3.2. Results of duration measurement of vowel [i] in citation forms vs. in spontaneous speech	22

2.1.4.	Observations and Discussions	23
2.1.4.1.	Intrinsic vowel duration in different tones	23
2.1.4.2.	Comparison of vowel duration in citation forms vs. in spontaneous speech	25
2.1.5.	Summary and conclusion	27
2.2.	Perception data of Mandarin vowels	27
2.2.1.	Methodology	28
2.2.1.1.	Stimuli and test procedures	28
2.2.2.	Results from perception test of vowel [i]	30
2.2.3.	Discussion	31
2.2.3.1.	Fundamental frequency pattern as the primary cue for tone perception	36
2.2.4.	Summary and conclusion	38
Chapter 3:	Production of Mandarin tones in spontaneous speech .	40
3.1.	Introduction and objects	40
3.1.1.	Mandarin phonology: tonally related phenomena	42
3.1.1.1.	Lexical tones	42
3.1.1.2.	Neutral tones	43
3.1.1.3.	Tones and stress	48
3.1.1.4.	Neutralization (deletion) of tones	49
3.2.	Methodology	51
3.2.1.	Production data of spontaneous speech	51
3.2.1.1.	Inclusion of tokens	52
3.3.	Results and analysis from the production data	55
3.4.	Discussion: the physical property of tones in spontaneous speech	63

3.5.	Summary and conclusion	72
Chapter 4: The perception of Mandarin tones in spontaneous speech		74
4.1.	Objectives	74
4.2.	Methodology	75
4.2.1.	The experiment: how lexical tones from spontaneous speech are perceived in isolation	75
4.2.2.	Stimuli and test procedures	76
4.3.	Results and analysis	78
4.4.	Discussion	86
4.4.1.	Fundamental frequency pattern in spontaneous speech ..	88
4.5.	Summary and conclusion	91
Chapter 5: Tones and intonation		92
5.1.	Introduction	92
5.1.1.	The breath-group theory of intonation	94
5.1.2.	The declination theory of intonation	95
5.1.3.	Declination as a discourse effect	96
5.1.4.	Chinese tones and intonation	97
5.2.	Data of speech production – spontaneous speech	100
5.2.1.	Methodology	100
5.2.2.	Results	102
5.2.2.1.	Measurements of production of spontaneous speech	102
5.2.3.	Analysis of results	104
5.2.4.	Analysis and discussion	106
5.2.4.1.	Intonation of sentences that can be characterized by the declination theory	107

5.2.4.2.	Intonation of sentences that can be characterized by the breath-group theory	118
5.2.4.3.	Intonation of sentences that can be characterized by neither the breath-group theory nor the declination theory ...	126
5.3.	Comparison of spontaneous speech vs. read speech	135
5.4.	Summary and conclusion	142
Chapter 6: Summary and conclusion		146
